

H.R. 3 is the Fewer Cures Act

Government price-setting leads to patient access restrictions, resulting in fewer and delayed treatment options.

The denial or delay of these drugs that treat various cancers, Cystic Fibrosis, and central nervous system disorders, like SMA, can be a death sentence for these patients. We should not place this same burden on American patients.

FIGURE ONE

Fewer New Medicines Are Available When Governments Set Prices

100% Americans have access to all 270 global new medicines from 2011-2018

Nancy Pelosi's plan would jeopardize access for American patients.

Number of New Medicines Available by Country

of 270 global new medicines launched in the United States from 2011-2018

FIGURE TWO

Other Countries Have Substantial Delays for Medicines Already Available to U.S Patients

Americans currently have the fastest access to new medicines.

Nancy Pelosi's plan would jeopardize access for American patients.

Average Delay (in days) in Availability of New Medicines by Country

of 270 new medicines launched in the United States from 2011-2018 and available in a given country

H.R. 3 is the Fewer Cures Act

FIGURE THREE

The United States is leading the charge in creating new medicines that could bring life saving cures.

57%

The U.S. is leading the charge in creating over half of new global medicines.

Nancy Pelosi's plan would jeopardize access for American patients.

The U.S. has 57% of breakthrough drugs in clinical development

For example: The U.S. produced 111 cures, 100 more than France, which developed 11.
